Skills

Full-stack development

Data analysis

API integration

Web design

About Me

I am specialized in full-stack development and Machine Learning. I have deep technical proficiency in the MERN stack (MongoDB, Express.js, React, Node.js), LAMP stack(Linux, Apache, MySQL, PHP), full-stack frameworks; Next.js(React framework) and Laravel(PHP framework), Backend as a Service(supabase and firebase), cloud (Google Cloud and AWS) and vector database (pinecone).

For the last one year, I have been expanding my expertise into Python for Machine Learning and practical mathematics (linear algebra, calculus and statistics), giving me a strong understanding of how AI models are structured and trained.

Beyond writing code, I am highly skilled at technical debugging, code documentation, and identifying edge cases in software logic.

Education

Bachelors of Science in IT

2021 - 2025

Technical University of Mombasa

Work Experience

Freelancer

2025 - Current

Web Development

- Architected and developed websites focused on user satisfaction and security
- Collaborate with my colleagues on github to create our own solutions (I have attached my portfolio link).
